Lemex: Responsive Single Page Template

Thank you for purchasing the product. I hope you will be more than happy with it. There is a brief instruction on how to use the product below.

By the way, if you do like this product please, **feel free to rate it** ⭐⭐⭐⭐⭐. Thank you!

Contact Form

In order to receive the emails from your visitors, you need to provide your email address. Open a file named "forms.js" and find the following lines:

ownerEmail:'email@email.com',

where email@email.com is your email address.

and

smtpMailServer:'smtp',

where **smtp** *is your smtp server (for gmail - smtp.gmail.com).*

```
//forms
;(function($){
    $.fn.forms=function(o){
        return this.each(function(){
            var th=$(this)
                ,_=th.data('forms')||{
                    errorCl:'error',
                    emptyCl:'empty',
                    invalidCl:'invalid',
                    notRequiredCl:'notRequired',
                    successCl:'success',
                    successShow:'4000',
                    mailHandlerURL:'bat/MailHandler.php',
                    ownerEmail:'email@email.com',
                    stripHTML:true,
                    smtpMailServer:'smtp',
                    targets:'input,textarea',
                    controls:'a[data-type=reset],a[data-type=submit]',
                    validate:true,
```

Content

In order to change demo content of any page open the file named **index.html** in any familiar text editor.

There are comments that will help you to understand the file.

The website pages are separated with the following comments:

```html
<!--============================header============================-->
    <header>
        <div class="inner">
    </header>
<!--============================content============================-->
    <section id="content">
        <ul id="pages">
        <!-- Home page -->
        <li id="home" class="slide">
        <!-- home page end -->

        <!-- Service page start -->
        <li id="services" class="slide bg1">
            <div class="main slogan">
```
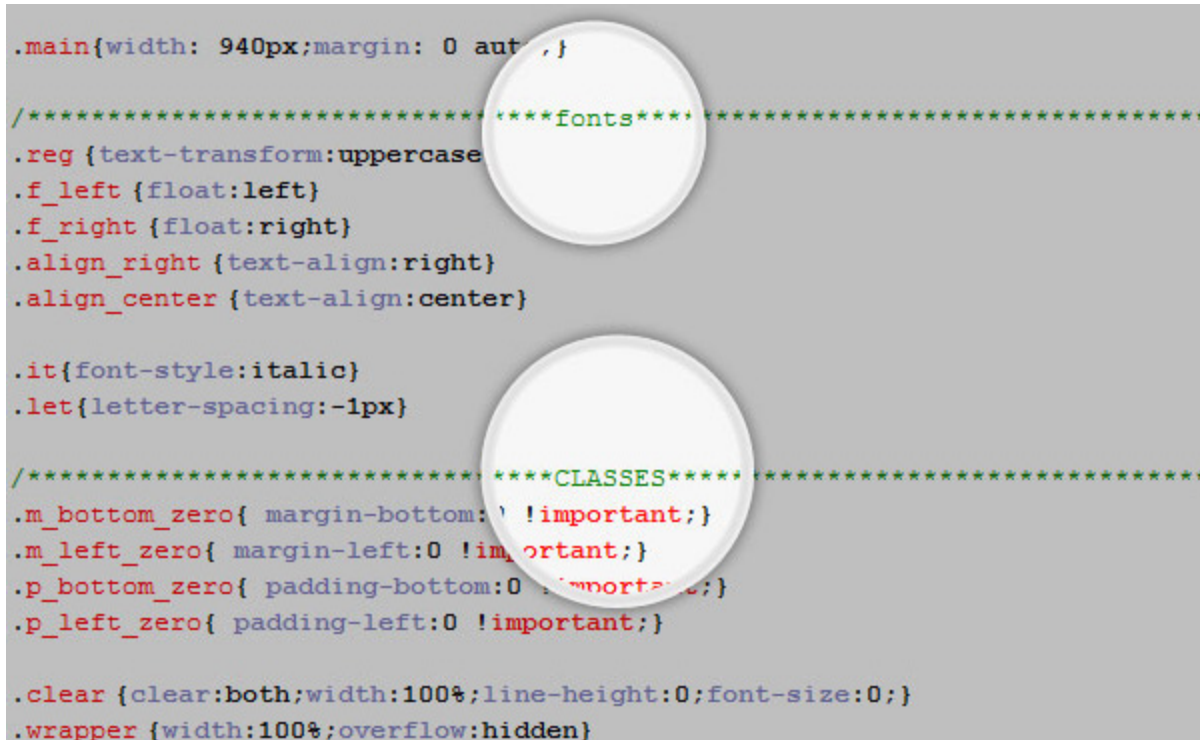

Everything that is located between this comments belong to the relevant page of the template.

In order to edit this file you should have a basic knowledge of HTML.

Styles

There are files with all styles in the folder "**css**".

"**style.css**" is the main file with template styles. It is well organized and contains needed tips in order to help you.

```css
.main{width: 940px;margin: 0 aut  ,}

/*****************************    ****fonts***   ******************************
.reg {text-transform:uppercase
.f_left {float:left}
.f_right {float:right}
.align_right {text-align:right}
.align_center {text-align:center}

.it{font-style:italic}
.let{letter-spacing:-1px}

/**************************    ****CLASSES****  ****************************
.m_bottom_zero{ margin-bottom:   !important;}
.m_left_zero{ margin-left:0 !im ortant;}
.p_bottom_zero{ padding-bottom:0   mporta  ;}
.p_left_zero{ padding-left:0 !important;}

.clear {clear:both;width:100%;line-height:0;font-size:0;}
.wrapper {width:100%;overflow:hidden}
```

In order to edit the styles you should have a basic knowledge of CSS.
